

Extinguishing fire without water

COMPCO
Fire Systems

Keeping valuable items dry with gas suppression

While sprinklers provide excellent protection to nearly all buildings, water can seriously damage their contents.

In areas containing computer rooms, communications equipment or data storage, water ingress can cause as much damage as fire. What's more, irreparable harm to your equipment, data loss and downtime can leave your business counting the cost of lost business and an impaired reputation.

Gas suppression systems provide the fire protection you seek without the risk of damaging your vital equipment. Whatever your individual requirements, COMPCO Fire Systems will design, supply, install and commission a gas suppression system that suits the exact needs of your project.

Using the right agent

Depending on your specification, our systems can employ these extinguishing agents:

- FM200
- IG-55
- IG-541
- Carbon Dioxide
- Novec 1230

Where to use gas suppression

- Computer Suites
- Electrical Cabinets and Switchgear Rooms
- Control Rooms and Telecommunication Facilities
- Stores and Archives
- Medical and Laboratory Equipment

Setting the standard

At COMPCO, we perform all installations to the highest quality and standards. What's more, our work is backed by specific method statements, risk assessments, and health and safety policies.

As COMPCO Fire Systems is LPCB Level 4, BAFSA, Construction Line and Safe Contractor approved, you can feel sure our commitment to service, workmanship and safety satisfies your every expectation.

Comprehensive fire protection solutions

COMPCO offers complete nationwide fire protection solutions, from consultancy to design and installation. Our portfolio of products and services includes:
