

Safeguarding storage

**COMPCO**  
Fire Systems

## Defending warehouses, logistics and distribution centres against fire

The size and scale of today's storage units can present a significant risk to your business. Unless properly protected, a serious fire in a large storage facility or warehouse might lead to the loss of life, stock and property. The incident could leave your business counting the cost of compensation, lost revenue, pollution breaches, and a damaged reputation.

Using the latest fire control technology linked with conventional sprinklers or Early Suppression Fast Response (ESFR) roof sprinklers, COMPCO will minimise the risks to your business.

Featuring a competitive, efficient and professional package for warehousing and distribution networks, COMPCO Fire Systems can protect your:

- High bay warehousing
- High density storage warehouses
- Automated storage and retrieval systems
- Pallet picking
- Narrow aisle racking
- Push-back racking
- Bonded warehouses
- Free-standing storage
- Mezzanines

Providing prime engineered solutions for many top distribution and material handling companies, COMPCO fire systems are suitable for units from 50,000 to 550,000 square feet and heights from 6 to 37 metres.

The offering extends to acting as the principal contractor on your site. We provide a full turnkey service, from design, obtaining planning permission and co-ordinating other trades on site to handover.

As COMPCO Fire Systems is LPCB Level 4, BAFSA, Construction Line and Safe Contractor approved, you can feel sure our commitment to service, workmanship and safety satisfies your every expectation.

## Comprehensive fire protection solutions

COMPCO offers complete nationwide fire protection solutions, from consultancy to design and installation. Our portfolio of products and services includes:

- Automatic sprinkler systems
- Hydrant mains
- Wet and dry risers
