

Protecting our future generations

**COMPCO**  
Fire Systems

## Preventing fire in schools, colleges, academies and universities

Fire damages or destroys an average of 25 schools a week. With almost a third of school fires occurring during the day, the safety of pupils and staff is often at risk. What's more, fire can leave educational establishments counting the cost of a long-term disruption to education.

Using the latest fire control technology, COMPCO Fire Systems provides quality engineered fire-protection solutions for primary and secondary schools, colleges, academies and universities throughout the UK.

### Minimising disruption

To reduce the impact on staff and pupils, we can install your system out-of-hours or during a new building's construction. COMPCO can also act as the principal contractor on your project. From design, obtaining planning permission and co-ordinating other on site trades to handover, we provide a full turnkey service.

Working alongside some of the UK's largest building contractors and Private Finance Initiative (PFI) providers, COMPCO operates to the highest standards of service, workmanship and safety. So, you can be sure our systems meet and exceed the exacting standards set by educational trusts and governors.

*"Only fires that are allowed to grow cause the catastrophic damage we see resulting from some school fires. Sprinklers are 99 per cent effective in limiting damages and in our experience, losses in buildings fitted with sprinklers are up to 90 per cent less than those in schools where no system was fitted."*

Larry Stokes, Chair of the Arson Prevention Bureau's Schools Working Group

## Comprehensive fire protection solutions

COMPCO offers complete nationwide fire protection solutions, from consultancy to design and installation. Our portfolio of products and services includes:

- Automatic sprinkler systems
- Hydrant mains
- Wet and dry risers
- Water mist sprinkler systems
